

Introducing Subnovii, a non-invasive treatment that delivers surgical like results.

SOLIZ HEALTHCARE SOLUTIONS IS THRILLED TO OFFER
ADVANCED PLASMA TECHNOLOGY.

Plasma technology is the exciting new treatment taking the aesthetic market by storm. With a variation of devices on the market, we took time to extensively research the treatment, most specifically as it relates to the device delivering the treatment. Soliz Healthcare Solutions first priority is the safety of our patients, in tandem with best in class results. We are excited to offer Subnovii, an Advanced Plasma technology that employs LF+ Technology, unlike other devices.

So what, exactly does a Subnovii Plasma treatment entail? It effectively takes advantage of the fine layer of ionized gas, or plasma, that exists along the surface of your skin. Plasma devices emit energy that instantly sublimates a precise spot on the skin area. A sealed wound is created and shock delivered to the tissue below to stimulate fibroblast activity which stimulates collagen, elastin and hyaluronic acid. The tip of the plasma device never actually touches the skin but it's the power of molecular physics that gives this treatment its magic.

Contact us today, to schedule your plasma consultation and uncover how we can help you obtain the results you're looking for.

FREQUENTLY ASKED QUESTIONS SECTION

WHAT AREAS CAN BE TREATED WITH SUBNOVII? The most popular areas to treat are around the eyes (both upper and lower), peri-oral (around the mouth), forehead, jawline, décollete and neck. Because Subnovii can target very specific areas of concern, your provider may discuss combining with other aesthetic treatments.

HOW LONG DOES THE TREATMENT TAKE? The length of the procedure will depend on the area you are treating. This is an 'in office' procedure and you'll easily be you may headed home minutes after the procedure.

WHAT POST- CARE STEPS ARE REQUIRED? Every patient will receive specially formulated post-care products and instructions to keep the area dry to help with the healing process. It is important to use sun protection long after treatment.

WHEN WILL YOU SEE RESULTS? Results can be seen immediately after the treatment and beyond. You will see continued improvements for up to 6 months after your Subnovii procedure.

WHO IS A CANDIDATE FOR SUBNOVII? Talk to you provider about whether a treatment with Subnovii is right for you. Some skin types may be at risk of post procedure pigmentation issues, so it's important to talk with a licensed aesthetic provider.

WHAT SHOULD YOU EXPECT FROM YOUR SUBNOVII TREATMENT? Because the plasma device creates an instant wound on the skin, small scabs will form that can take 5-10 days to fall off. The scabs are a natural and protective barrier to the magic taking place below. Because the treatment area is immediately sealed, there is a very low risk of side effects but the skin may feel tight and itchy as the area heals. Once the scabs fall off, the skin beneath may look pink. This is renewed skin and any redness should progressively fade.
